LAURA OPRISAN

Software Engineer

SUMMARY

Ambitious, conscientious, detailed-oriented software engineer with enthusiasm for new interesting projects.

WORK EXPERIENCE

Freelancer

November 2020 - Present

- Built websites for clients from different business fields by integrating user experience, usability and search engine optimisation services
- Managed to deliver the services according to the agreement established with the clients

Recent projects:

Video Game Sound Designer Portfolio – A portfolio website that integrates the client's custom sounds and showcases his story, vision, skills and projects. It also provides easy ways of getting into contact with the artist. This modern resume, alongside his skills, helped my client achieve his dream job.

Dentist4u (Dentist Office) – A clean presentation website displaying information about the dentist office and its services. It offers multiple user-friendly and convenient contact options, including direct calls and social media apps, facilitating seamless communication with the doctors. Additionally, it integrates an embedded Google Map feature for easy navigation and location-based information.

Front-End Developer - worked in collaboration with Blue Dream Media

July 2019 - August 2022

- Collaborated with a developer to create presentation websites for clients
- Enhanced an existing website by incorporating additional functionalities to fulfill new requirements and updated the UI for a more modern and appealing design
- Improved a client's online visibility by helping him rank first in Google Search Engine combining techniques of search engine optimisation

Recent projects:

Noel Kindergarten – Optimized parts of the UI to both achieve a modern look and match the style of the existing website (e.g. main slider), added extra sections to meet the client's needs (e.g. our team slider, optional activities/clubs section, price details separate pages) and updated related documents.

Travel Advisor – Organized client's ideas in collaboration with my colleague, achieving proper and creative sections, and implemented them into the presentation website, resulting in a visually appealing and coherent aesthetic.

Personal software projects

Human Library – A full stack web application designed to be a place where people can share their life story and discover others. The app can be used independently of the login state of the user. Non-logged in users can read stories and filter them, while logged in users have additional features: they can post their story, like/unlike and save/unsave other stories, edit and delete their own post, comment to each post, like/unlike the comments and delete their own comment.

Other projects: Rock Paper Scissors game (Javascript), Hotel Room Reservation System (C++), NASA – Picture of the day (HTML, CSS, Javascript) and more.
